Imprezza consists of veneer sheets which have been reinforced with a phenolic backer. These sheets are then given a high quality traditional lacquer finish; the flow of the liquid lacquer preserves the warmth and lustre of the natural wood.

The lacquer finish is applied under highly controlled conditions which guarantees a very consistent result. Due to the traditional lacquer system it is possible to re-lacquer the sheets. This product is offered in a range of finishes and can be bonded to any surface suitable to regular HP laminates. The advantages:

- Saves time and lacquer costs
- Guarantees a consistent quality finish
- Has a lacquer finish which can also be used as a basecoat
- Offered in different gloss levels, from matt to high build high gloss
- The finish is environmentally friendly, reducing your VOC output

IMPREZZA

Leeuwenburgh Manufacturing Company's wide range of veneer species, unique product formats, textures and finishes are specified across many market sectors, worldwide. The people at Leeuwenburgh know the natural appeal of wood - warmth, depth and lustre - every leaf unique. From their modern production facility at Raamsdonksveer in The Netherlands they know how to enhance these natural characteristics to produce beautiful wood veneers. More than 100 species find their way to customers in more than 25 countries.

For ease of use and to create more design possibilities, the veneers are offered in three product formats of thin sheets and boards branded Lignaflex, Lignapal & Lignacore. Lignaflex is a thin flexible sheet. Lignapal is wood veneer with a phenolic laminate backing. Lignacore is a range of veneered boards. Both Lignapal and Lignacore are offered with pre-lacquered finishes. All product formats can be combined to offer consistency and uniformity across the specification or project.

Greenline Industries is North America's Exclusive Agent

BEAMWOOD

Oak wood in its purest form

Pure wood, including cracks, knots and natural colour variations. Rough slices of beams bonded to a black surface. Real wood from beams.

Beam wood is available with a phenolic back, which features black beam joints and cracks. Beamwood is 1.2 mm thick and can be processed as a traditional HPL.

- extra deep cracks
- extra deep joints
- extra robust
- extra thick veneer for easy folding
